## **Editor's Note**

The papers offered in this years proceedings of the Virtual Systems and MultiMedia Conference represent a diverse and innovative approach to the theme; Contribute, Communicate, Collaborate.

A range of full papers were presented for review, and the acceptance rate was 58%. Ninety seven papers were submitted. Of these, fifty six were accepted for inclusion in the general conference proceedings. Of these, eighteen were further reviewed and selected for publication in Springer LNCS.

The selection procedure involved a rigorous review by a panel of academics in which each paper was refereed by three reviewers and assessed by each against normal academic publishing standards.

In addition to the full papers, a number of presenters were invited to contribute posters or interactive works and where available, abstracts are included in these proceedings.

Other publications relating to these proceedings include;
